

Paladin Healthcare unique and “salient” features are as follows:

1. Anti-Microbial finish on the plates, adapters and wall stand-offs.
2. Wall stand-off to reduce leaning and the “bounce” effect when using a device.
3. Multiple holes to attach future products from different vendors without the need to purchase new plates each time.
4. The ability to adjust the rail mounting adapter to different heights relative to the fixed rail, allowing adaptability to user demand, new codes or new vendor products without going to the wall and adjusting the rail itself.

Pictures below show:

1 item – same adapter - 4 different heights
