# Our Manufacturing Partners

and Many More!

# Planning and Design

Storage Systems specializes in effective planning of useful spaces in order to maximize operational efficiency. We will:

Begin every project with an on-site evaluation of space and existing products utilizing our strong knowledge base of product and the application

Provide CAD with Revit design files - at no charge – to showcase a real-time view of the completed space demonstrating functionality with emphasis on exceeding the end user's expectations

Meet all required government and engineering codes (*life safety, fire, seismic, local*)

Provide consistent communications with all parties involved (*end-user, corporate entity, architect, contractor, equipment planner, etc.*)

Work within the timeline and budget requirements necessary of the project

# Installation

Storage Systems provides installation services for every product we sell.

Anywhere in the United States

Reliable, licensed installers

Detailed coordination of delivery and installation by Installation Coordinators at Storage Systems

Storage Systems will be on-site to receive the product delivery, off-load the truck, assemble the products, move product into place and install. We will manage any damages or returns for the customer as well, if applicable.

Storage Systems will also clean up and dispose of all trash and shipping material.

# Project Management

Even the best products, design plan and installation services require competent project management. Storage Systems' project managers are on the job!

Decades of expertise

Personal attention to oversee all aspects of a project from onset to completion

Thorough approach

Detailed management of timelines and deliverables

Consistent communications with all parties involved

*(end-user, corporate entity, architect, contractor, equipment planner, etc.)*
