

In a surge situation, pretty takes a back seat to practical!

Access to equipment, supplies, PPE and disposal of hazardous sharps and waste are the most basic of needs. Paladin's Forward Treatment Station Carts (FTS) are deployed in minutes not hours, bringing all necessary means to deliver safe and appropriate care to any non-traditional spaces i.e., convention centers, schools, hospital lobbies, anywhere.

Paladin Healthcare LLC can deliver total solutions for fixed and mobile conditions, with a VERY short installation time. Self-contained high-volume oxygen systems, battery powered suction devices and all aspects of PPE managed in small footprint mobile or rail mounted systems.

The FERNO Spiracle Oxygen System is designed to hold two carbon fiber oxygen cylinders or two M60 aluminum cylinders which extends the time between refills, increases productivity, and reduces risk of injury. Other Oxygen mounting options and systems are also available.
