

# Capital Equipment Procurement Support

Leverage competitive data to drive your capital purchasing decisions

Capital equipment is a large-spend category that can be challenging since products are purchased infrequently, technology changes rapidly and there is significant pricing variation. As you face changing needs and fragmented services, making the right choices for planning and acquiring capital equipment is critical.

The Premier® Capital and Construction Services team serves as an extension of your team, helping equip you with the most current information when sourcing capital. We leverage data, competition and volume to drive savings. Our robust database of over 45,000 categories provides you with market history for equipment price points and helps you identify saving options. On average, we identify 18 percent in savings opportunities.

The Capital and Construction Services team can support or fully manage your capital sourcing process. Our services and software include:

1. Electronic Request for Proposal (eRFP): Support service that identifies multiple options and competitive prices for all equipment needs.
2. Price Benchmarking (PriceGuard™): Pricing service that provides a comprehensive review of your capital equipment quotations.
3. Capital Budget Review: Pricing evaluation for more accurate planning.
4. Contract matching: Identify Premier contracted vendors.

The decision-making process in purchasing capital can be a challenge. Having a partner that can provide immediate assistance in the decision process relative to pricing is an invaluable resource to have. With all that materials professionals have on their plates, it is a joy to have a partner that you can lean on with a proven history and expertise as it relates to capital buying and pricing.

– Kenyetta Keys, Senior Director, Supply Chain and Support Services, Doctors Community Hospital
